ABOUT THE COVER

Starting on page 16, Jim Six examines the GP35 fleet of the Atlantic Coast Line and describes how he modeled two of the ACL's GP35s from a pair of factory decorated models from Athearn's Ready To Roll™ line. Even though several modifications were required, some of which required the use of body putty, Jim was able to avoid the need to completely strip and repaint the models. If you've been afraid to attempt modifications to a predecorated model, you'll want to see how it can be done. *Photo by Jim Six.*
